

Mt Ellis (main summit)

Date

Mon, 12/19/2022 - 05:15

Activity

Skiing

Ellis has seen alot of skier traffic since my last submission for Ellis on December 15, 2022. A quick pit was dug on a south east facing slope at 7936 feet. Height of snow = 90 cm. Bottom faceted layer was 25 cm thick. The top 65 cm of snow is beginning to consolidate into a slab. We did not experience any signs of snow instabilty. My previous submitted observation for Ellis noted surface sluffs, yesterday we had none. I believe there was a slight temperature inversion as we all remained comfortable.

Region

Northern Gallatin

Location (from list)

Mt Ellis

Observer Name

Dave Combs
