

Natural large point release north of Bridger

Bradley Meadow

Bridger Range

12/26/2022

Code

L-N-R2-D2-O

Elevation

7500

Aspect

SE

Latitude

45.83220

Longitude

-110.92800

Notes

From BBSP: "North of our boundary a natural avalanche was observed on the south end of the lower Bradley's Meadows ridge. A point release originated in the south facing cliffs. When it hit the steep knob above the gully it pulled the facets off of the rocks and willows, depositing an approx 4ft deep pile of debris. There were old tracks on the slope and no one was caught."

Number of slides

1

Number caught

0

Number buried

0

Avalanche Type

Loose-snow avalanche

Trigger

Natural trigger

R size

2

D size

2

Bed Surface

O - Old snow

Problem Type

Persistent Weak Layer

Slab Thickness units

centimeters

Single / Multiple / Red Flag

Single Avalanche

Advisory Year

22-23
