

Texas Meadow - windy

Date

Wed, 01/04/2023 - 12:00

Activity

Skiing

Extended column test at lat/long 45.84006, -110.93326, elevation 7698 feet, east facing, approximately 20 degree slope. Depth of snow = 95 cm. There were 2 obvious interfaces: 1) approximately 20 cm below the surface (ice crust) and 2) approximately 20 cm above ground, the height of the faceted snow. ECTP18, shear quality q1. The snow is noticeably dense/stiff. We stayed on lower angle slopes, the skiing was good.

Region

Bridger Range

Location (from list)

Texas Meadow

Observer Name

David Combs
