

From email: "I came across this older avalanche yesterday when I was guiding a group in the Kirkwood area, it's an area in the Cabin Creek drainage. It looked to be an older natural slide probably just after the last storm cycle a few days to almost a week ago now. North, North East Aspect. Approximately 39 degree slope (Because of a creek with open water just below the slide, I couldn't get close enough to accurately measure the slope)". Photo: J. Norlander
