

Point Releases in Alex Lowe Basin

Date

Mon, 01/16/2023 - 12:35

Activity

Skiing

Toured into Alex Lowe basin today and noticed lots of point release slides. Most started as spindrift in the cliff bands along the ridge and gained more snow as they fell into the aprons. Skied a north and south facing couloir, ski cut at the top of both runs and got the new snow to sluff most of the way down. Didn't encounter any cohesive slabs, just lots of sluff sliding down.

Region

Northern Gallatin

Location (from list)

NORTHERN GALLATIN RANGE

Observer Name

Spencer Lipsteuer
