

Cracking and collapsing of wind drifts in Wolverine

Date

Tue, 01/24/2023 - 13:30

Activity

Skiing

Had some cracking, collapsing of wind drifts up high on the ridge today and few Dry Loose slides running into Wolverine.

Winds were swirling, and coming from the south when I was skiing, but obviously the storm pattern is moving from the north.

Super wind scoured slopes from yesterday not bonding well in other places.

Region

Bridger Range

Location (from list)

Wolverine Bowl

Observer Name

Matt Standal
