

# Hyalite Basin

Date

Sun, 10/29/2023 - 04:40

Activity

Skiing

Went for a skin up to Hyalite Peak yesterday to check out snow conditions. We found about 8-12 inches of new snow sitting on a base at Hyalite Lake. We saw no signs of instability in the area. Small cornices were observed on the Hyalite saddle, and a hit or miss 1 inch wind slab directly below the ridge.

Region

Northern Gallatin

Location (from list)

Hyalite Peak
