

Remotely Triggered Avalanche in Specimen Creek

Specimen Creek
Southern Gallatin
1/5/2025
Code
Latitude
45.02650
Longitude
-111.04800
Notes

Many ridgelines had been scoured down to the grass from yesterday's winds. HS was around 100cm around 8k feet and significantly shallower at lower elevations. New snow totals from the past couple of days was around 20-30cm. We experienced a remarkable number of thunderous collapses throughout the day (I lost count), one of which triggered an avalanche into Specimen Creek while we were in the flats.
